# Good food deserves another opportunity.

Affordable surplus meals today.
Responsible resource recovery tomorrow.

**01** **Rescue edible surplus**

**02** **Explore suitable organic recovery**

Student-led venture • Meal pilot proposed • Fertilizer experiment planned

ECOBIZ / UNITEN

# It is almost closing time.

## What happens to the food left behind?

Concept illustration

### Founder observations

Rice offered to birds. Side dishes shared with workers.

### What remains unknown

Other destinations, quantities and frequency.

### Before any sale

Meal handling and storage need validation.

Existing redistribution is not automatically waste prevented.

ECOBIZ / UNITEN

# One unsold meal. Two possible benefits.

FOR STUDENTS

- More affordable meals
- Convenient reservations

FOR VENDORS

- Potential additional revenue
- Less unsold food

Demand, pricing, surplus, margins and participation still need testing.

# Start with one vendor. Learn with one community.

**Residential block**

**Cabin vendor**

Vendor participation not yet secured.

**Nearby students**

The vendor is both a supply-side customer and a potential partner.

Staff may be a later customer segment.

# Rescue edible food first. Investigate suitable leftovers next.

**PHASE 1 / MEAL PILOT**
Discounted edible surplus

Subject to suitability and validation

Uncollected meals are candidates, not automatically suitable inputs.

**PHASE 2 / FUTURE RECOVERY**
Suitable organic materials

Competition experiment: purchased materials, separate from campus-waste recovery.

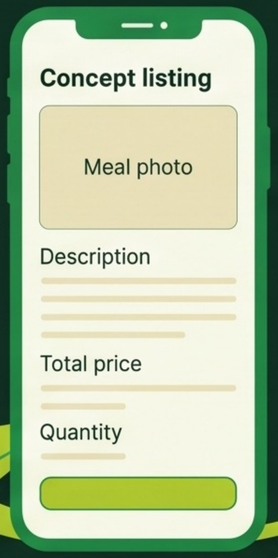

ECOBIZ / UNITEN

# Discover. Reserve. Collect.

**01** / DISCOVER

Residence WhatsApp → private Telegram

**02** / RESERVE

Telegram first. App when ready.

**03** / COLLECT

Collect directly at the vendor's stall.

Every offer: meal photo, description, total price and quantity.

Later: app reservations, with Telegram retained for promotion.

ECOBIZ / UNITEN

# A reservation is only the beginning.

## 9:40–9:55 pm

Proposed collection window

**RESERVE**
No advance payment.
Vendor sets aside
the agreed quantity.

**COLLECT & PAY**
Pay the vendor at collection.

**CONFIRM**
Vendor confirms collection
and successful payment.

Bottom notes: Reported closing time: around 10 pm. Packing arrangements need agreement.

Only a paid, **collected** meal counts as a **completed sale.**

# One completed meal. RM0.50 for EcoBiz.

Illustrative transaction

**RM7.00** + **RM0.50** = **RM7.50**

Vendor price | EcoBiz fee | Student pays

Student pays vendor → Vendor later settles EcoBiz's fee

Proposed fixed service fee per completed sale, not a percentage or service tax.

Revenue is not profit. Cancellations, refunds or corrections may affect the amount.

# Trust makes the pilot work.

## CLEAR OFFER

Clear prices and collection times.

## RELIABLE COLLECTION

Direct support, vendor confirmation and missed-collection follow-up.

## ACCURATE RECORDS

Reconcile daily in launch week; weekly once reliable and agreed.

**Contact handling and no-show procedures remain open.**

No penalty approved. No advance payment to retain.

# The app connects the journey.

A channel for reservations and operational records.

## Concept workflow

Browse offers

Reserve a meal

Record completed purchases

**Competition objective:** a polished, functioning live demonstration.

Live-demo readiness has not yet been established.

# The second opportunity starts with an experiment.

**PURCHASED INPUTS**

**DOCUMENTED EXPERIMENT**

Record the process, observations and costs.

**EXPERIMENTAL SAMPLE**

Present the sample with physical packaging.

Method and timeline still require selection and validation.

Campus-waste recovery, fertilizer effectiveness and sale readiness are not yet established.

Concept illustration

# A future product needs more than a finished package.

Prospective users: UNITEN farmers, fertilizer-using workers and interested lecturers.

Test use cases, desired characteristics, suitability, pack size, costs and demand.

No immediate sales of the experimental sample.

**Around RM15**

Early price idea.
Pack size not defined.

# Four students.
# A connected set of responsibilities.

## Muaz

Leadership & application

Team decisions and app demonstration

## Iskandar

Operations & data

Discovery, coordination and business model

## Haziq

Creative & design

Brand, pitch and experimental packaging

## Faiz

R&D & sustainability

Research and experiment documentation

Vendor, university and adviser relationships remain prospective.

Owners still needed: daily support, fee reconciliation and collection assistance.

# RM100 makes prioriti- prioritisation essential.

Approximately
**RM100**
Pooled personal funding

**PRICE THE ESSENTIALS**

- Trial materials & containers
- Packaging & transport
- Operating needs & customer channels

No confirmed allocation or outside funding.

Track cash expenses and team time separately.

Recurring financial viability remains unproven.

ECOBIZ / UNITEN

# The competition should see evidence.

Four objectives. Each needs its own proof.

OBJECTIVE

**Completed meal purchases**

Confirmed paid collections

OBJECTIVE

**Functioning live app**

A polished demonstration

OBJECTIVE

**Documented experiment**

Method, observations and limitations

OBJECTIVE

**Physical packaging**

Clearly labelled experimental sample

Achievement is not yet verified in the current BMC.
Numerical sales and impact targets have not been set.

ECOBIZ / UNITEN

# Small pilot. Clear learning. Conditional growth.

**28 Sep–4 Oct**
Discovery & approach selection

**By 9 Oct**
Registration target

**5–18 Oct**
Pilot & evidence preparation

**18 Oct**
Readiness target

**23 Oct**
Briefing & video submission

**30 Oct**
Physical final-stage pitch

After the competition: review demand, costs and workload before expanding.

2026 team targets; organizer dates require verification. Pilot depends on vendor agreement and feasibility. Final stage depends on progression.

# Measure the benefit. Test the assumptions.

## MEASURE

- Paid, collected meals
- Verified savings, including the fee
- Vendor benefit and workload
- No-shows and settlement accuracy

## LEARN

- Test participation, suitable surplus and late-window demand.
- Validate product suitability and economics.

## DECIDE

- Use evidence to continue, revise or expand.

Track collection, acceptance, rejection and processing separately.
Document experimental evidence separately from campus-waste recovery.

ECOBIZ / UNITEN

# Value the food.
# Prove the model.
# Grow responsibly.

Gratitude. Affordability. Responsible resources.
Honest evidence. Community contribution.

Secure the vendor → Run the pilot → Document learning

Let’s discuss the next step.

ECOBIZ / UNITEN SUPPORTING DETAIL

# Purpose, values, and evidence status

## VISION

A UNITEN community where food is valued and less goes to waste.

## MISSION

Make surplus meals more affordable and develop responsible ways to recover suitable organic waste through a student-led, financially sustainable business.

## OUR VALUES

- **Gratitude through action** — Value food through practical waste reduction.
- **Affordability** — Manage student spending while preserving vendor value.
- **Responsible resource use** — Rescue edible food; validate residual recovery.
- **Honest evidence** — Separate intentions, experiments and verified results.
- **Community contribution** — Build reciprocal relationships; consider donations when feasible.

## DISCOVERY-STAGE MODEL

- **Campus-focused** food rescue and organic recovery.
- **Confirmed decision** = approved intention, not proven outcome.
- **Proposal** = arrangement to test or negotiate.
- **Hypothesis** = expectation without sufficient evidence.
- **Outstanding** = unresolved decision or validation.
- Observations and estimates are identified separately.

Concern for hunger in Syria, Lebanon and Palestine motivates the founder; EcoBiz's initial contribution is local. Future donations depend on available profits. No percentage, recipient or schedule is committed.

SUPPORTING DETAIL

# Who we serve—and how we reach them

| | PHASE 1 / SURPLUS MEALS | PHASE 2 / FUTURE RECOVERY |
|---|---|---|
| **CUSTOMERS** | Nearby residential students; vendors as supply-side customers and partners. Staff are a possible later segment. | Prospective UNITEN farmers, fertilizer-using workers and interested lecturers. |
| **VALUE** | Affordable meals and convenient reservations; potential vendor revenue and less unsold food. Depends on demand, pricing and collection. | Potentially useful fertilizer and a route for suitable organic waste. Quality, affordability, suitability and environmental benefit need validation. |
| **CHANNELS** | Residence WhatsApp → private Telegram listings and reservations → later app reservations. Telegram promotion, direct vendor outreach and stall collection. | Direct campus outreach; experimental samples and packaging; intended future app sales when ready. |
| **RELATIONSHIPS** | Direct support, clear prices/times, vendor-confirmed purchases and missed-collection follow-up. Contact and no-show procedures remain open. | Discuss uses, desired characteristics, pack sizes, prices and feedback. No proven repeat-purchase relationship. |

Proposed model: participation, demand and readiness remain unvalidated.

# What makes delivery possible

## PHASE 1 / MEALS

**Resources:** Four-person team; vendor participation; residence channels; reservation and transaction records; app; shared project funds.

**Activities:** Vendor interviews, student discovery, recruitment, offers and reservations, collection/payment confirmation, fee reconciliation and pilot records.

**Prospective partners:** Cabin vendor, UNITEN administration and residence representatives. YES Club is not confirmed.

## PHASE 2 / RECOVERY

**Resources:** R&D effort, trial inputs, containers, storage/processing space, packaging, expertise and prospective users.

**Activities:** Select/document process, source inputs, evaluate outputs, investigate collection/processing, measure costs and interview users.

**Prospective partners:** Agricultural users, lecturers/advisers, university staff and processing partners if needed.

| TEAM OWNERSHIP |
| --- |
| **Muaz** — Final decisions and app-demo readiness. |
| **Iskandar** — Registration, timeline, vendor interviews, surveys, business model and initial pitch. |
| **Haziq** — Brand, interview/submission media, pitch and experimental packaging design. |
| **Faiz** — Research/documentation, packaging investigation and likely collection leadership. |

Several resources remain unsecured; no institutional or processing agreement is confirmed. Daily support, fee reconciliation and collection assistance still need named owners.

# The full economic model

**RM7.00** + **RM0.50** = **RM7.50**

Vendor price | EcoBiz fee | Student pays

Illustrative: vendor retains RM7.00 before its own costs and settles RM0.50 with EcoBiz.

## REVENUE & ASSUMPTIONS

- Meal fee = confirmed completed sales × RM0.50, adjusted for cancellations, refunds or corrections. Propassimant is not profit.
- Fixed proposed service fee; not a percentage or service tax. Revenue is not profit.
- Founder estimates: ordinary meals RM8–10; discounted vendor price RM5–7 before fee. Not verified prices.
- Future fertilizer: around RM15 is an early idea; pack size and costs undefined. No competition-sample revenue.
- Approximately RM100 self-funded; no confirmed allocation or outside funding.

## COSTS & DISCIPLINE

- Meals: outreach, team time, purchase support, reconciliation, agreed packaging and customer-channel maintenance.
- Recovery: trial materials, containers, collection/transport, processing resources/space, validation, packaging and rejected inputs/failed batches.
- Price essentials before commitments. Track cash and team time separately.
- Packaging sourcing, cost and biodegradability claims need verification.
- No validated break-even or financial projection. Future donations depend on available profit after operating needs.

Payment disputes, refunds and settlement evidence require vendor agreement.

# Meal pilot: offer to settlement

## 01 / INTERVIEW
Confirm surplus, current leftover uses, meal suitability, prices, workload and participation conditions.

## 02 / AGREE
Set offer, responsibilities, collection window, handling, cancellations/refunds, payment confirmation and settlement.

## 03 / LIST
Telegram first, then app. Display the student's total payable price.

## 04 / RESERVE
No advance payment. Vendor sets aside agreed quantity; agree packing arrangements.

## 05 / COLLECT & PAY
Collect at the stall, 9:40–9:55 pm. Pay vendor. Reported closing: around 10 pm.

## 06 / CONFIRM
Vendor confirms paid collection. Reservations alone create no fee.

## 07 / RECONCILE
Completed sales, adjustments and fees: daily in launch week; weekly once reliable and agreed.

## 08 / FOLLOW UP
Record missed collections under an agreed policy. No approved penalty; no prepaid amount to retain/refund.

Contact-number timing, purpose, access, retention and follow-up owner remain open. A number does not establish an obligation to pay.

# Recovery: collection to experiment

## PROPOSED FUTURE OPERATION

- Vendor-side large plastic container → next-day team collection
- Faiz is the likely lead, with team assistance.
- Before starting, agree:
  - Acceptable inputs and separation
  - Storage, container provision and cleaning
  - Transport, processing site and permissions
  - Method, capacity and product validation
  - Rejected-material handling and assistant availability

## COMPETITION EXPERIMENT

- Purchased materials → documented experiment → experimental sample
- Record inputs, quantities, method, dates, observations, costs and limitations.
- Packaging must say: Experimental sample.
- Processing method and timeline remain unconfirmed; fermentation is not a validated commitment.

Purchased trial inputs are not campus waste diverted.

Packaging or elapsed processing time does not prove fertilizer effectiveness or sale readiness.

# Where EcoBiz could add value

Connect student affordability, vendor revenue recovery and future organic recovery within one campus community.

## EXISTING PRACTICES TO UNDERSTAND

- Vendor discounting
- Food shared with workers
- Informal student purchasing groups
- Campus sustainability initiatives
- Other waste arrangements

## ADDITIONAL VALUE TO TEST

- Close coordination with a nearby vendor
- Residence-based outreach and quick feedback
- Convenient reservations and reliable collection
- Whether coordination adds benefit beyond existing practices

No completed competitor review or established competitiive advantage. Surplus quantities and other leftover destinations remain unmeasured. Do not assume UNITEN lacks relevant initiatives.

Positioning is an intention—not proof of being first, unique or zero-waste.

# Roadmap and readiness conditions

| 2026 TARGET | OUTCOME | DEPENDENCIES |
|---|---|---|
| 28 Sep–4 Oct | Discovery, registration and experimental approach | Vendor access, team capacity, feasible method and priced inputs |
| By 9 Oct | Competition registration | Verify organizer requirements and deadline |
| 5–18 Oct | Meal pilot, pitch evidence, experiment and packaging | Vendor participation, suitable handling, demand, budget and feasibility |
| 18 Oct | Readiness target | Working demonstration, achieved transaction evidence and honest sample status |
| 23 Oct | Briefing and online pitch-video submission | Prepared pitch separating results from proposals |
| 30 Oct | Physical final-stage pitch | Progression, live-app readiness, packaging and accurate evidence |

| | |
|---|---|
| **AFTER COMPETITION** | Review demand, costs, workload and team willingness; discuss UNITEN support. No support is assumed. |
| **LONGER TERM** | Campus-waste processing and repeat sales depend on permissions, validation, demand, resources and sustainable economics. More campus vendors only after the initial model works. |

Team planning targets, not verified organizer requirements. No approved expansion beyond UNITEN.

# Impact: what counts and what does not

| INDICATOR | MEASURE | INTERPRETATION LIMIT |
|---|---|---|
| **Meal rescue** | Paid, collected surplus meals; weight where practical | Reservations do not count. Establish the food's alternative destination. |
| **Affordability** | Comparable ordinary price minus total paid, including fee | Use verified comparable prices. |
| **Vendor benefit** | Revenue, feedback, workload and willingness to continue | Revenue is not profit; consider costs and displaced sales or worker meals. |
| **Reliability** | No-shows, on-time collections and settlement discrepancies | Small-pilot results do not prove campus-wide performance. |
| **Organic recovery** | Weights collected, accepted, rejected and processed separately | Purchased inputs are not campus waste; collection is not recovery. |
| **Experimental progress** | Method, inputs, observations, output and suitable assessment | A sample or elapsed processing time does not prove effectiveness. |
| **Community contribution** | Actual donations, amounts and recipients if made | An intention to donate is not achieved impact. |

No established greenhouse-gas, landfill-diversion, fertilizer-performance or donation results.
Account for resources used in collection, processing and packaging. Rice fed to birds is not landfill diversion.

# Risks in the meal business

Validate the assumptions before scaling.

| RISK / CURRENT STATUS | RESPONSE |
|---|---|
| **Vendor participation and fee acceptance** — unvalidated | Interview the vendor; agree pricing, workload, settlement and responsibilities. |
| **Late-evening demand** — hypothesis | Test through Telegram; record paid collections and feedback. |
| **Predictable edible surplus** — unvalidated | Record quantity, timing, food type and current leftover uses. |
| **Meal suitability** — operating dependency | Review handling and storage, seek appropriate guidance and agree eligibility before sale. |
| **No-shows** — plausible risk | Track missed collections; agree cutoff/follow-up and revise using evidence. No advance charge approved. |
| **Unrecorded or unsettled fees** — operating risk | Reconcile confirmed paid collections and adjustments daily, then weekly when reliable. |
| **Permissions and data handling** — outstanding | Confirm institutional, food-sale and data-handling requirements with relevant authorities or qualified advisers. |

These are proposed responses, not proof that the risks have been resolved.

ECOBIZ / UNITEN • SUPPORTING DETAIL

# Risks in recovery and continuity

| RISK / ASSUMPTION | RESPONSE |
|---|---|
| Every leftover can become fertilizer — unsupported | Select a process, establish suitable inputs and rejected-material handling. |
| Overnight storage and next-day collection — proposal | Agree sites, containers, separation, cleaning, transport and owners. |
| Useful output within competition timing — unvalidated | Choose an informed method; document progress and present experimental limitations. |
| RM100 covers the demonstration — unvalidated | Price essentials and prioritise before commitments. |
| Buyers at RM15 — hypothesis; pack undefined | Interview users; define product/pack, validate suitability and measure costs. |
| Waste, product and institutional requirements — outstanding | Confirm permissions and applicable requirements with authorities or qualified advisers. |
| Team capacity during and after competition — unvalidated | Assign owners and measure recurring workload; do not assume indefinite unpaid effort. |
| Overstated benefits — reporting risk | Separate results, estimates, existing redistribution, purchased-material experiments and future ambitions. |

The BMC is not a compliance assessment. Validation remains necessary.

ECOBIZ / UNITEN • SUPPORTING DETAIL

# Decisions before the next step

| WHEN | DECISION | SUGGESTED OWNER |
|---|---|---|
| Before meal sales | Vendor agreement; meals, prices, window, handling, packing costs and existing uses | Iskandar, Muaz and vendor |
| Before meal sales | Paid-collection confirmation, corrections/refunds, fee evidence and no-show policy | Muaz, operations owner and vendor |
| Before contact collection | Number-request timing, purpose, access, follow-up and retention | Muaz and operations owner |
| Before spending RM100 | Actual costs and prioritised demonstration allocation | Team; Muaz final approval |
| Before experiment | Method, inputs, location, advice, records and realistic timing | Faiz with relevant advice |
| Before campus collection | Sites, permissions, inputs, containers, cleaning, transport and assistance | Faiz, team and university/vendor contacts |
| Before fertilizer sales | Suitability, requirements, pack size, buyer interest, costs and price | Faiz and Iskandar with advice |
| During pilot review | Numerical targets, demand, repeat use and fee coverage of costs | Iskandar and Muaz |
| After competition | University support and sustainable team commitment | Team and UNITEN representatives |
| Once profits exist | Whether, how much, when and to whom to donate | Team; Muaz final approval |

Source: founder-approved discovery interview and strategy; team roles/dates from project notes. These are not independent validation.
